Information Disclosure Statement

1. The information disclosure statement filed 1/16/2001 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each U.S. and foreign patent; each publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

Drawings

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the master circuit comprising a slave circuit must be shown or the feature canceled from the claim 1. It appears from the description the master circuit is circuit 226 and the slave circuit is 252. Also, the figures do not appear to show "a second data output connected to the first data input" as recited in claim 20. No new matter should be entered.

Corrected drawing sheets are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief

description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-9 and 20 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The master circuit comprising a slave circuit as stated in claim 1 is not described in the specifications and figures. It appears from the description the master circuit is circuit 226 and the slave circuit is 252. Claims 2-9 are rejected due to dependence on claim 1. Also, the specification and figures do not appear to show "a second data output connected to the first data input" as recited in claim 20.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1, 2, 10, 15 and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Dickerson et al (US 4,617,423).

Regarding claims 1, 2, 10, 15 and 20, Dickerson discloses a data communication system shown in figure 4. The device 30 is a physical layer device having drivers, receiver and an interface connected to modem 36 for transmission across a medium. Item 34 is a bus that connects other multiple physical layer interfaces to one another. Therefore, the transmitted and the received signals from 30 are received by another apparatus 30 (figure 3). 30 transmits a differential signal from driver 94, this signal comprises a clock signal from element 76. Interface 30 also receives a differential signal at driver 98 and a differential clock signal at driver 215. These received signals are input to switch 80 and controls other outputs from the device 30.

Allowable Subject Matter

5. Claims 18 and 19 are allowed.
6. Claims 11-14, 16 and 17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
